

International Workshop on Managing Knowledge for Space Missions

KNOWLEDGE MANAGEMENT ACTIVITY IN THE SATELLITE DOMAIN IN JAXA (CKHP2)

Hiroaki Tateshita
Japan Aerospace Exploration Agency (JAXA)
18 JULY 2007

Outline

1. JAXA Organization
2. Our goal on Knowledge Management (KM)
3. Issues on KM
4. Activities for the issues
5. Result of activities
6. Future work

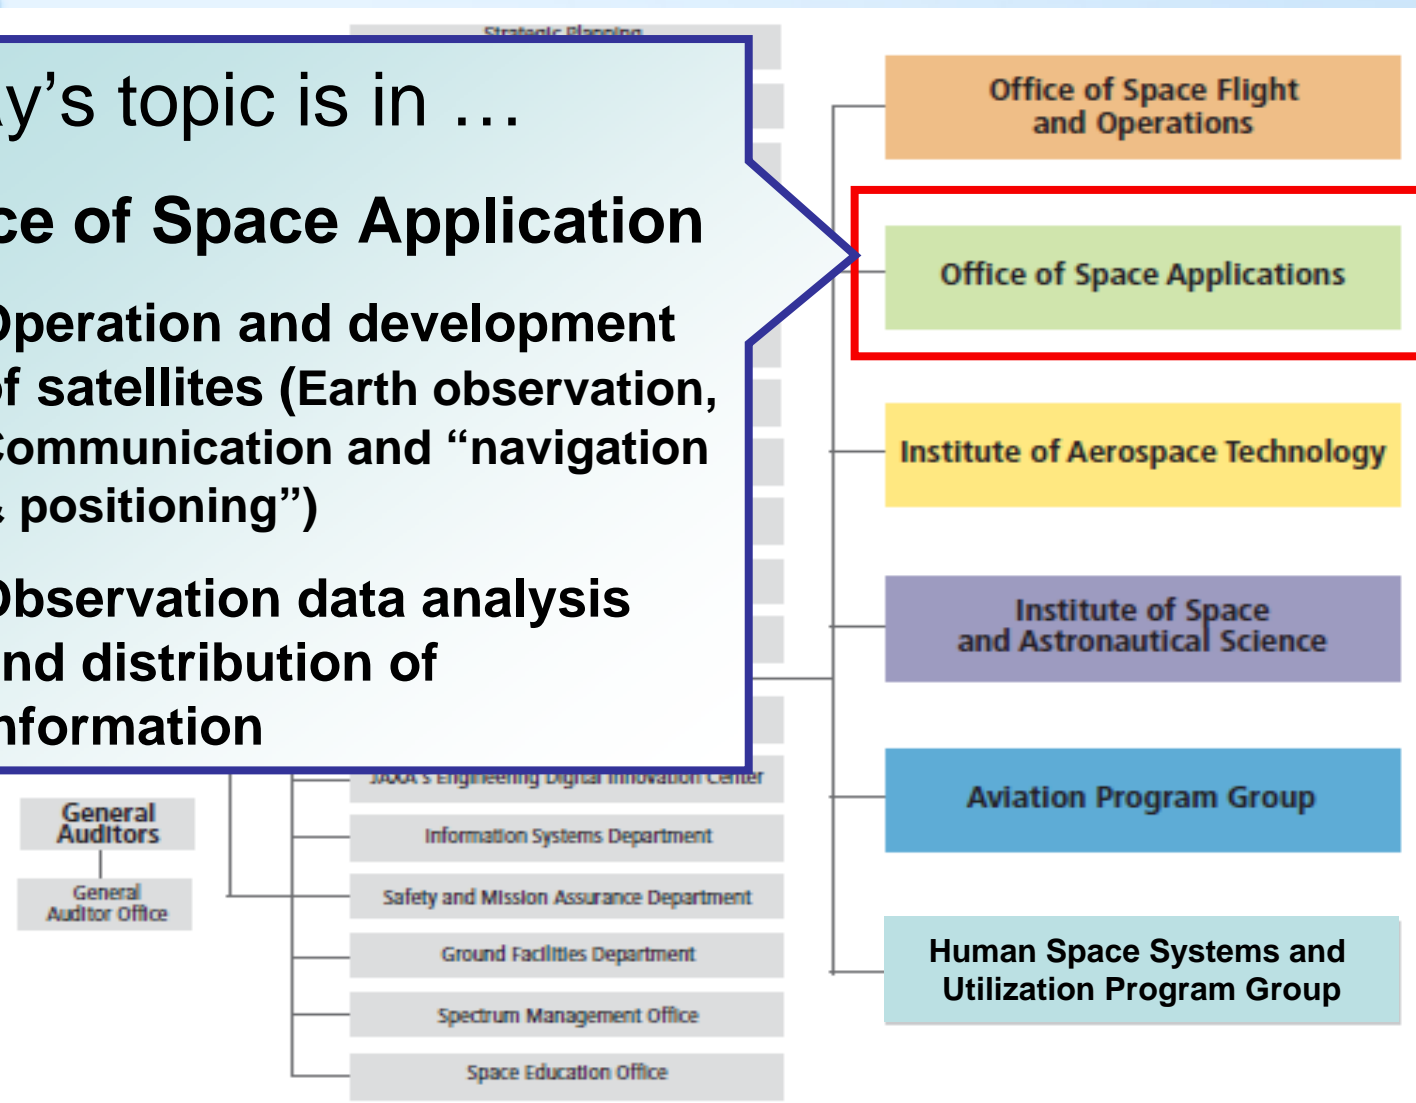

1. Our Organization

JAXA: Japan Aerospace eXploration Agency

Today's topic is in ...

- **Office of Space Application**

- Operation and development of satellites (Earth observation, Communication and “navigation & positioning”)
- Observation data analysis and distribution of information

1. Our Organization

2. Our goal on KM

3. Issues on KM
4. Activity for the issues
5. Result of activity:
6. Future work

2. Our Goal on KM

KM activity in the satellite domain

Improvement of the reliability
of Satellite Development

Assured transfer of
technological knowledge

Promotion of
leveraging technical
information

Prevention of
losing technical
information

1. Our Organization
2. Our goal on KM

3. Issues on KM

4. Activities for the issues
5. Result of activities:
6. Future work

3-1. Background

In 2004,
We found it

➤ A Culture which each satellite project had individual method of project management

➤ A lot of unclassified technical documents of a terminated project

start

Investigation for understanding current situation

3-2. Issues on KM(1/2)

➤ Inadequate Sharing knowledge with Other projects (issue #1)

- Impossibility to know even the existence of the information

- ◆ Until asking the project member directly

Reason

- Sharing information by Only Face-to-Face Communication

Reason

- Concern about incorrect transfer

- ◆ Not finalized information
- ◆ Proprietary information

3-3. Issues on KM(2/2)

➤ Losing knowledge of Terminated Projects (issue #2)

- Project = Temporary team
- Termination without classification of their technical documents
 - ◆ Important information might be disposed
 - ◆ Unimportant information might be left

Reason

- No standard rule of storage
- No destination of storage

Terminated
projects'
information

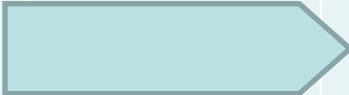

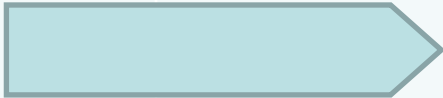

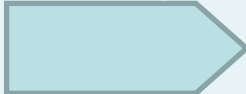

1. Our Organization
2. Our goal on KM
3. Issues on KM

4. Activities for the issues

5. Result of activity
6. Future work

4-1. Activities for the issues

➤ In order to solve those issues, we started our KM activities.

	2004	2005	2006	2007
Basic policy				
Standard rule				
Develop tools				
Apply rule and tools				

4-2. Scope as a first step

➤ Technical information of satellite projects

● Technical Documents

- ◆ Specification
- ◆ Requirement
- ◆ Design
- ◆ ...

Target in this time

● Technical Data

- ◆ Analysis data
- ◆ Test data
- ◆ CAD data, ...

4-3. Basic policy

➤ For leverage

- To share the existence of technical information at least
 - ◆ Compromise between “sharing” and “protecting”
- To use standard category among projects
- Responsibility to leverage-> User

➤ For storage

- Assured transfer at the termination
- Computerization of documents

4-4. Standard rule

➤ Purpose of the Standard rule

- Indicating specific process on the basic policy to project members

Discussion with
project members

➤ The important discussion points

- What and when do you use technical documents?
- What is easier and more intuitive categorization to find the documents?

Result of discussion

Definition of Contents with Priority
& Categorization

4-5. Contents with Priority and Categorization

Example

Category	Contents	Priority ^a
Engineering specification (ESPC)	System ESPC	*
	Sub system ESPC	*
	Interface Control Specification	*
	...	
Design report (Review Board)	preliminary design Document	*
	Detailed design...	*
	...	
...
Meeting materials	...	
Technical letter	...	
		...

^a The documents with asterisk '*' are high priority documents

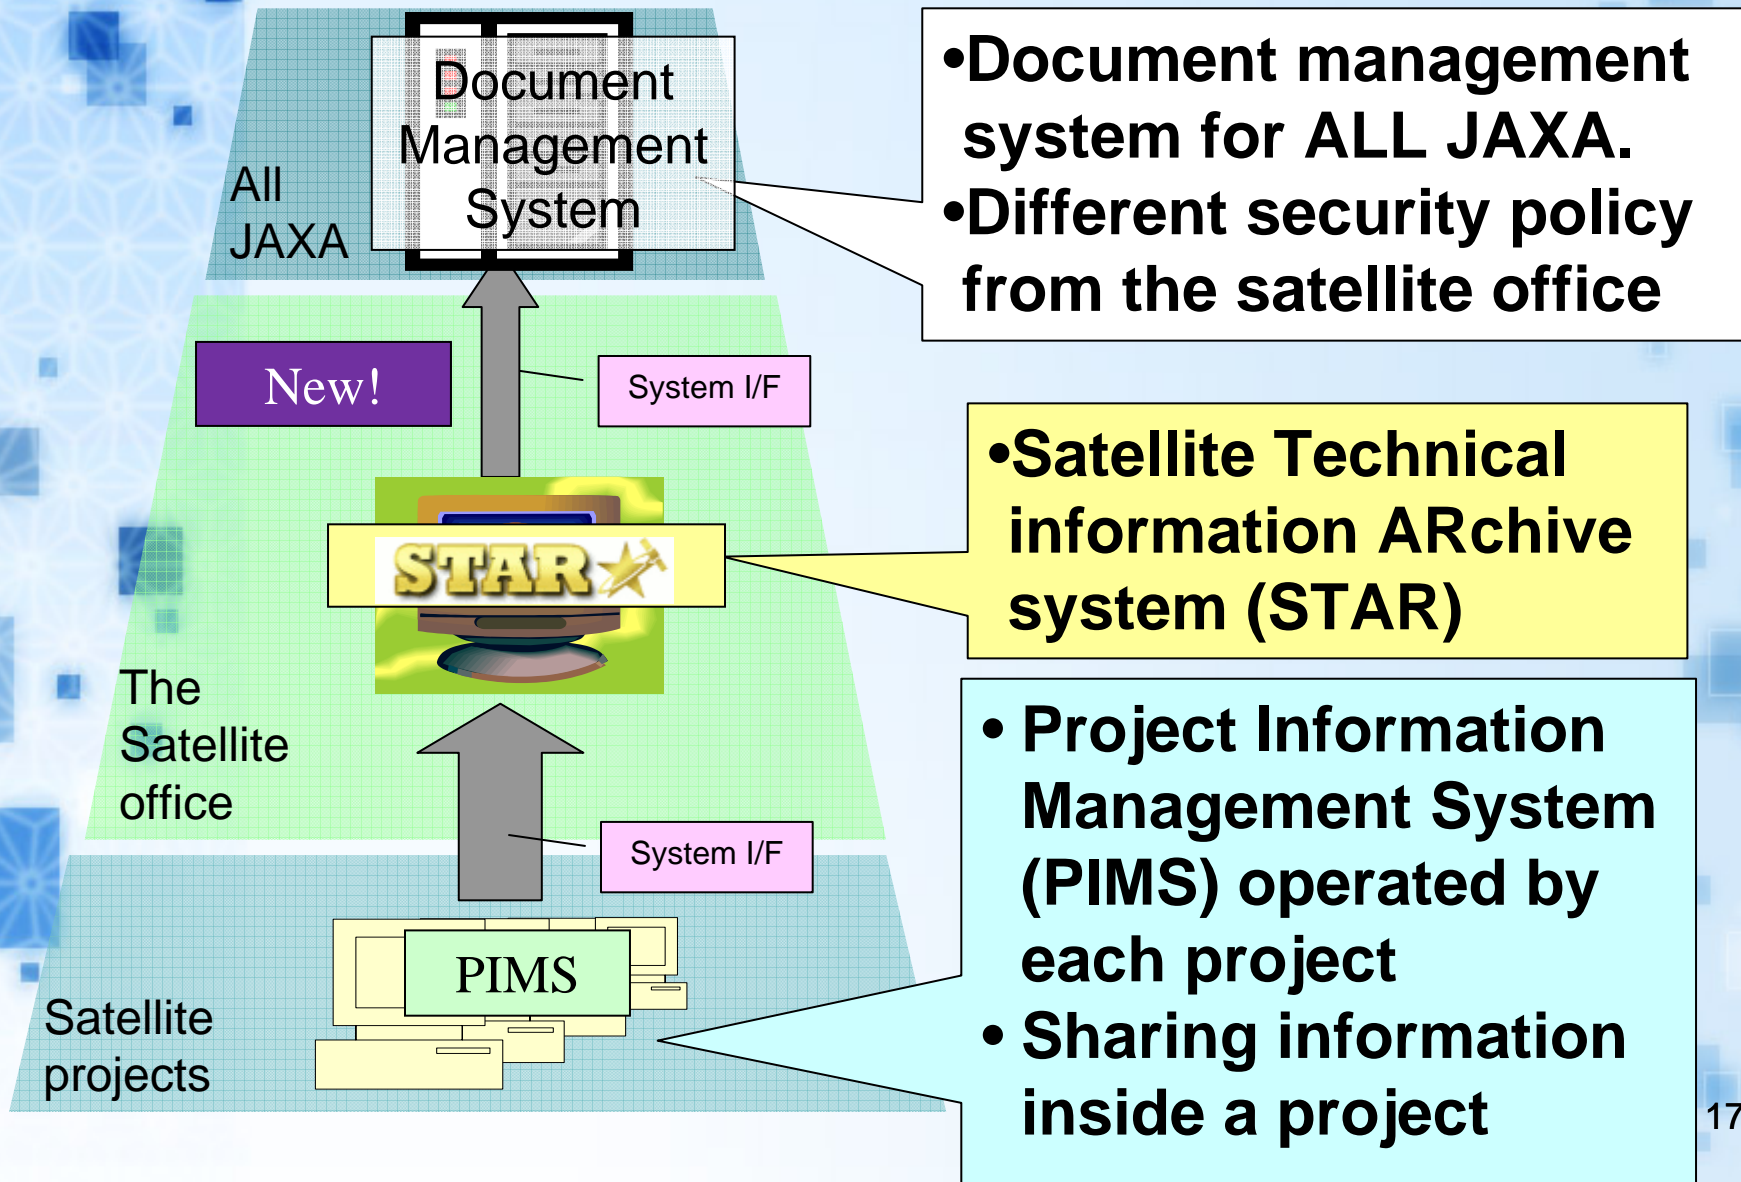

- We can understand
- What are technical documents?
 - Which is more important document?
 - How should I categorize documents?
 - Which is right category to find a document?

4-6. Other points of Standard rule

➤ Specific methods: how to ...

- Prepare for the document management when a project starts-up
- Leave the rationale of information on the technical documents
- Computerize documents
- Leverage information with responsibility
- Transfer assuredly to other departments when a project is terminated

4-7. Tools (whole architecture)

4-8. Tools (STAR)

➤ Three retrieval functions

Matrix Search interface showing a table with categories (Row) and satellites (Column). The table has columns for various categories like Planning, Design, and Development, and rows for different satellites like OKETS, ETS-8, WINDS, ALOS, GOSAT, and GPM DPR.

	OKETS	ETS-8	WINDS	ALOS	GOSAT	GPM DPR
計画・管理	16/32	15/15	46/46	26/26	6/24	16/16
技術仕様書類	12/14	34/34	29/29	54/54	2/23	17/17
設計基本類	6/8	18/18	21/21	21/21	11/21	16/16
設計解析	20/69	40/40	63/63	90/90	4/9	9/9
審査会	23/76	25/25	35/35	121/121	4/4	14/14
運用	17/37	3/3	6/6	13/13	0/2	27/27
利用・研究・実験	7/11	4/4	2/2	1/1	5/5	0/0
会議資料	38/44	2/2	107/107	6/9	0/0	3/3
外部発表	1/1	0/0	5/5	0/0	0/0	0/0
成果報告・納入	13/14	38/38	25/25	18/18	2/25	19/19

Matrix Search

Tree Search interface showing a hierarchical tree structure of documents. The tree is organized into folders like 'WINDS/基本設計書(9件)', 'WINDS/運用・研究・実験(20件)', and 'WINDS/外部発表(1件)'. The selected folder is 'WINDS/基本設計書(9件)', which contains sub-folders like '設計基本類(13/21件)', '設計解析(13/15件)', '審査会(23/76件)', '運用(17/37件)', '利用・研究・実験(7/11件)', '会議資料(38/44件)', and '外部発表(1/1件)'.

Tree Search

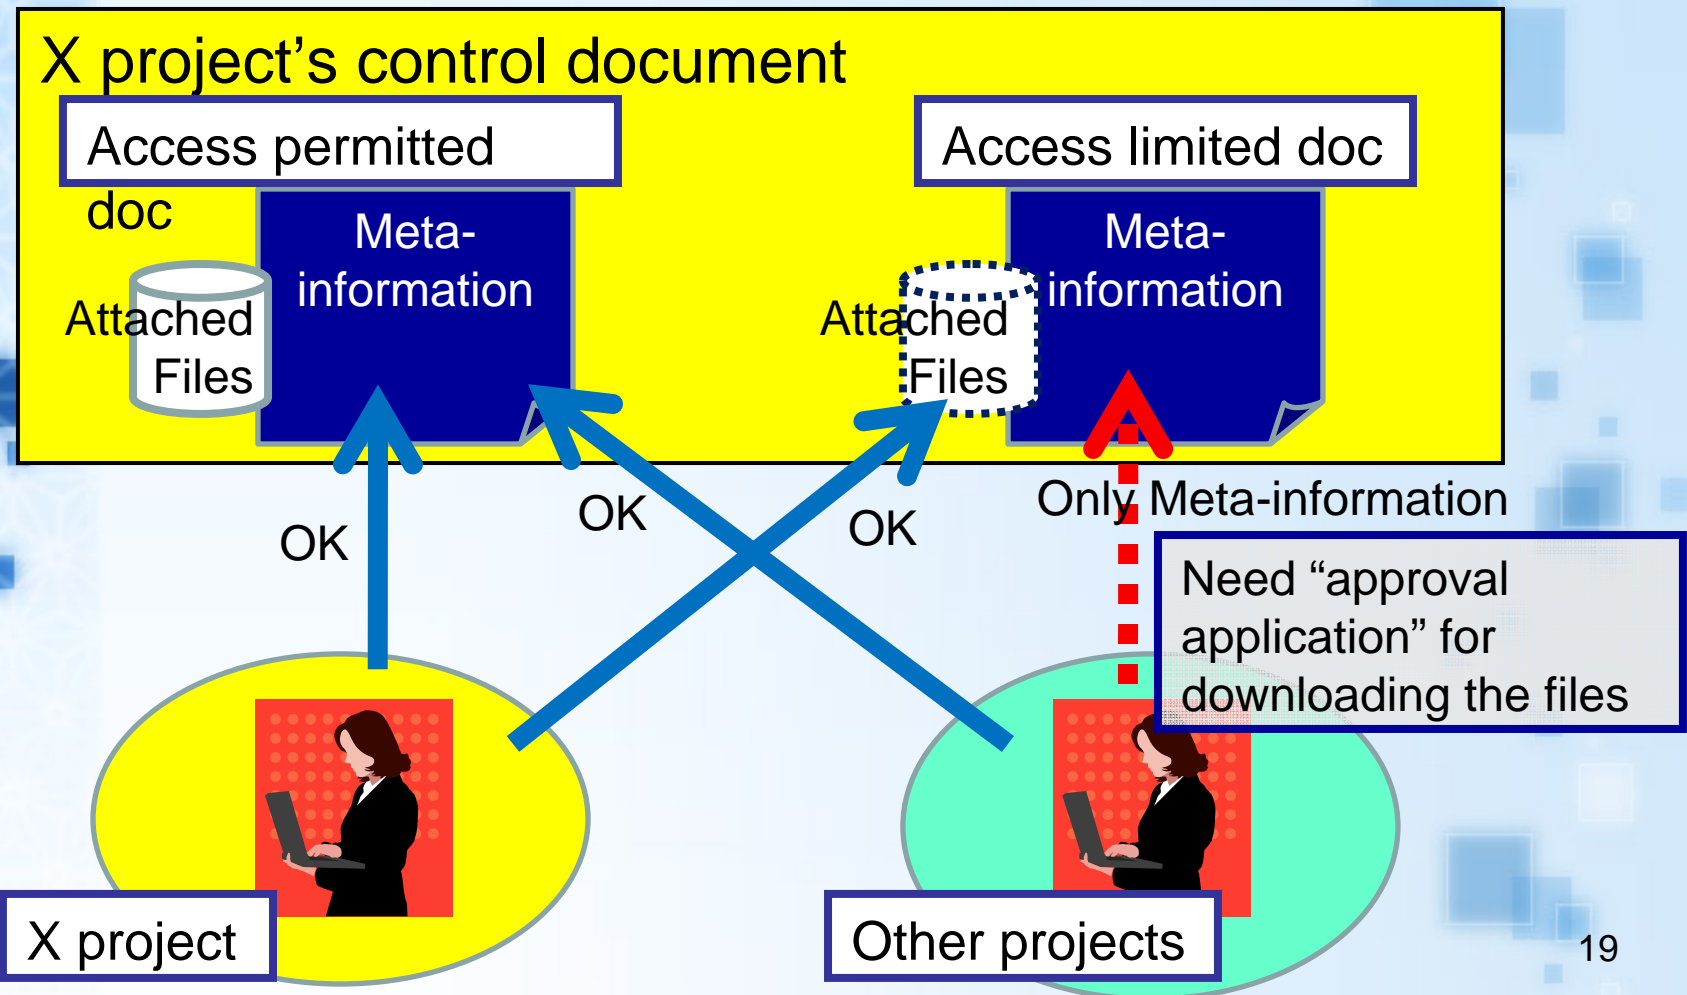

Meta Search interface showing a form for searching documents. The form includes fields for '文書番号' (Document Number), '文書名' (Document Name), '発行・制定日' (Issued/Established Date), '発行部署' (Issued Department), '作成者・担当者' (Author/Responsible Person), '作成機関' (Institution), 'キーワード' (Keyword), and '情報種別' (Information Type). There are also checkboxes for '文書のみ' (Documents only), '文書+添付ファイル(申請不要)' (Documents + Attachments (no application required)), and '文書+添付ファイル(申請要)' (Documents + Attachments (application required)).

Meta Search

Row: Std category
Column: Satellite

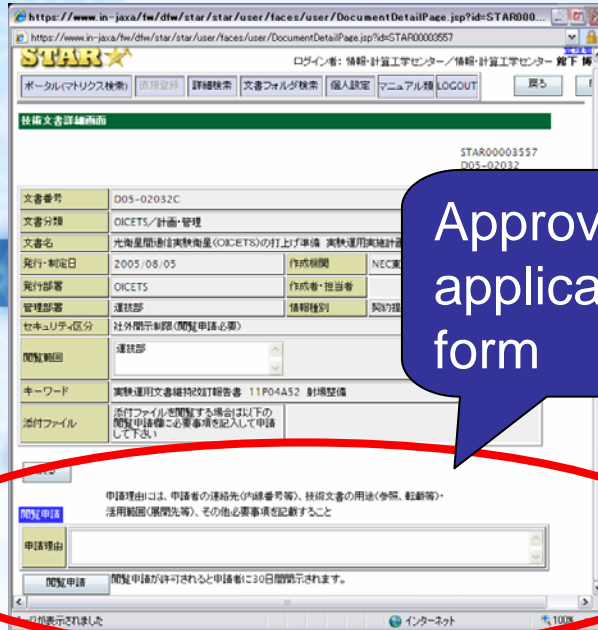

4-9. Tool (STAR)

➤ Function for proper access control

4-10. Tool (STAR)

➤ Function for approval application for downloading attached files

Approval application form

Access control person of Each project judge the application

➤ Prevention of “incorrect transfer of information”

1. Our Organization
2. Our goal on KM
3. Issues on KM
4. Activities for the issues

5.Result of activities

6. Future work

5-1. Result (standard rule)

- Smooth termination of two projects
(OICETS*1 in April, ALOS*2 in May)
 - Transfer important documents to other department
 - Disposal of unimportant documents

- Application the Standard categorization to projects

*1: OICETS (Optical Inter-orbit Communications Engineering Test Satellite)

*2: ALOS (Advanced Land Observing Satellite)

5-2. Result (Tools: STAR)

➤ The Information Stream (PIMS -> STAR) started in May 2007

- Technical documents in PIMS are being stored to STAR gradually

Promote sharing by not only face-to-face but also IT tools

improve

Inadequate sharing information (Issue #1)

- All of important technical documents in PIMS will be transferred to STAR before the termination of the project

Prevent losing PIMS contents of terminated Projects

improve

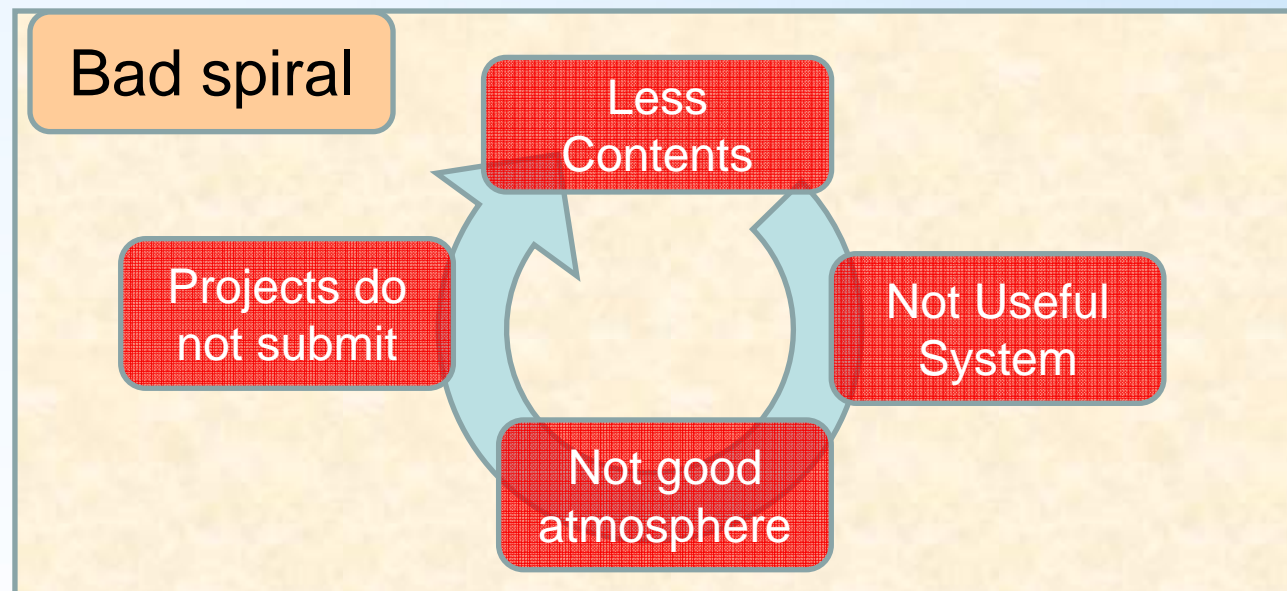

Losing of technical knowledge (Issue #2)

1. Our Organization
2. Our goal on KM
3. Issues on KM
4. Activities for the issues
5. Result of activities

6.Future work

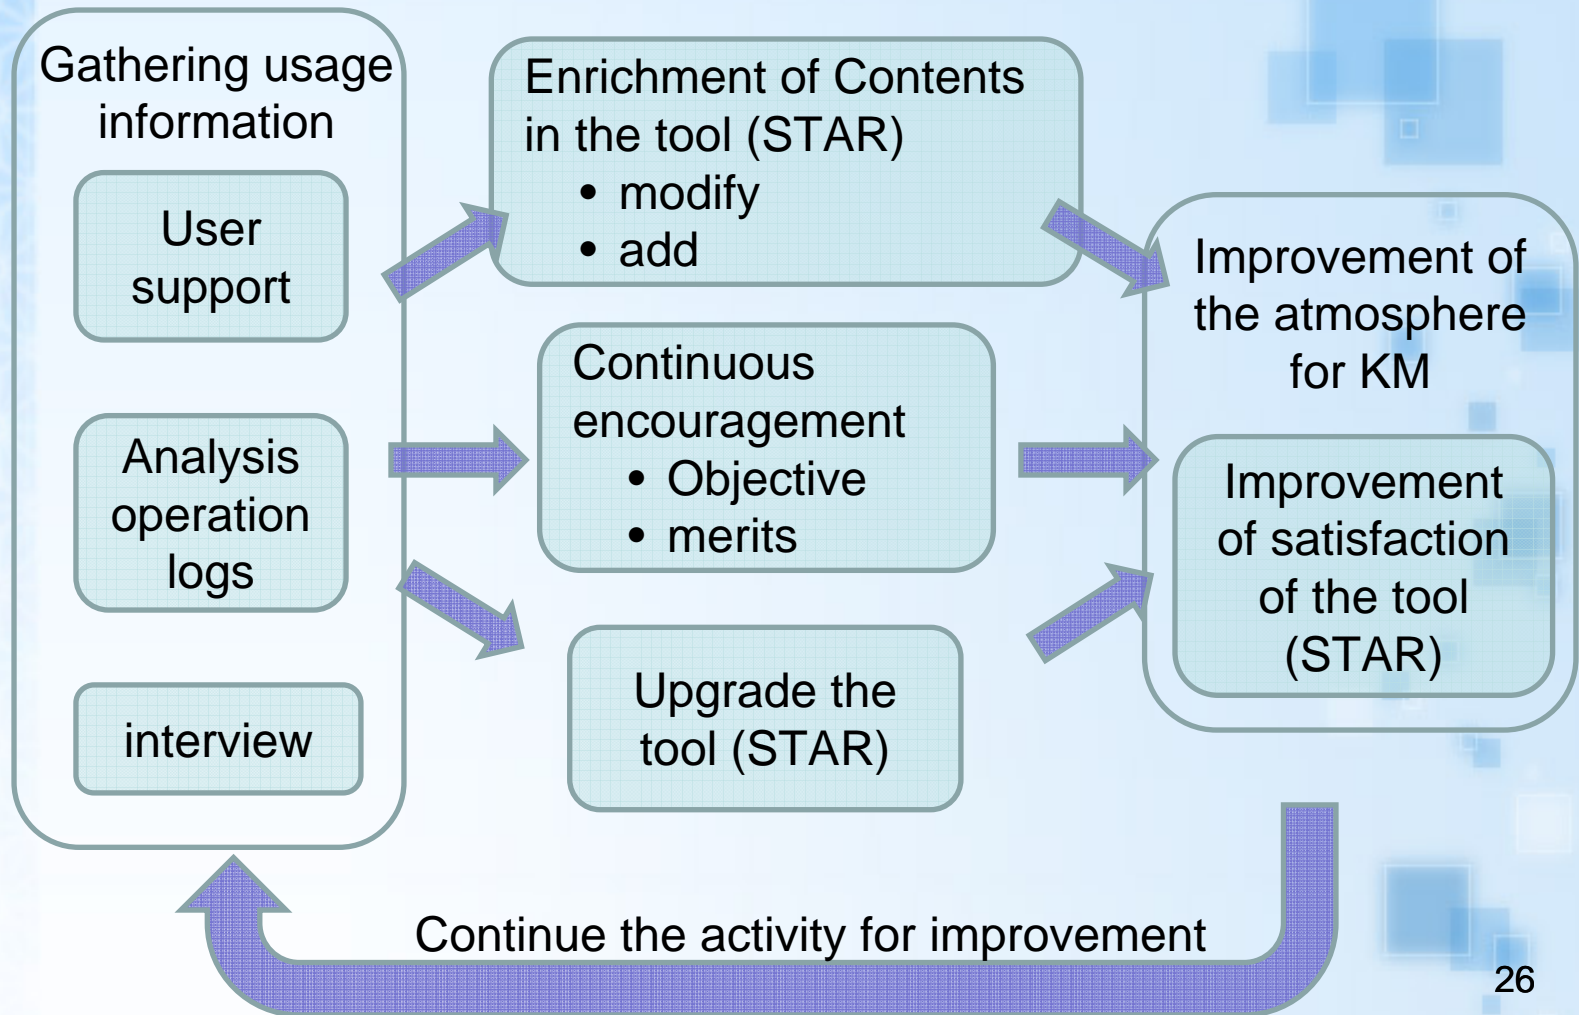

6-1. Remaining Issues

- Less usage of STAR than predicted
- More access limited documents than predicted

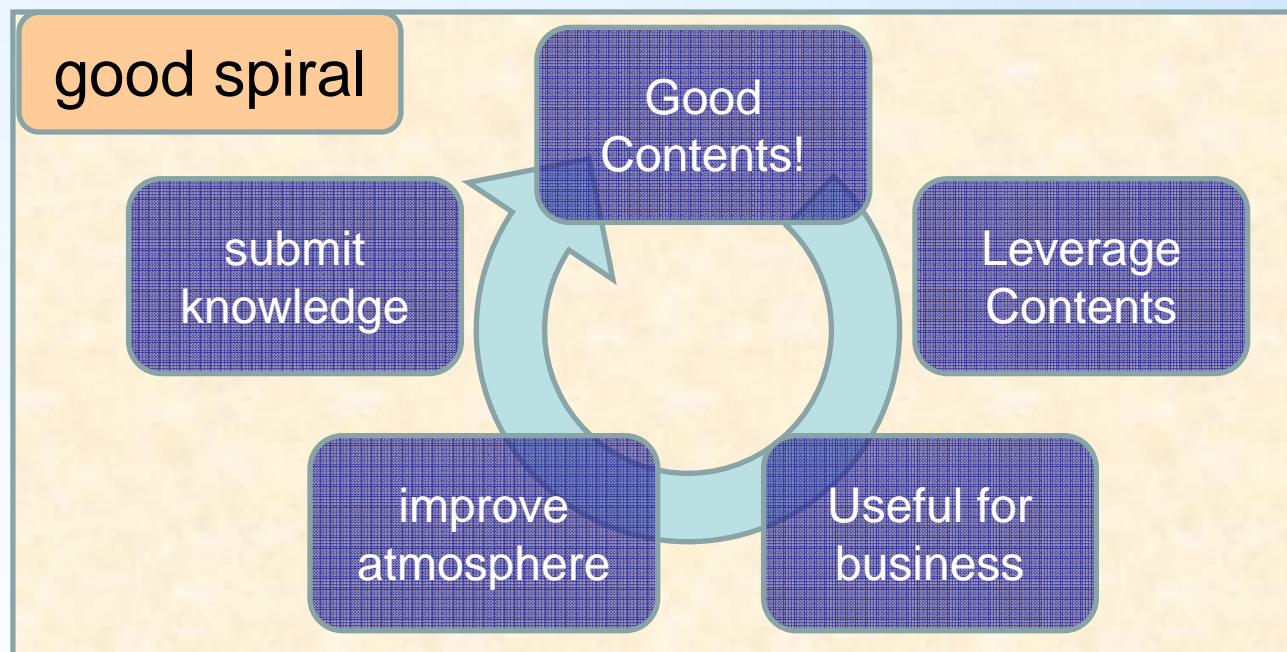

6-2. Future work (1/2)

➤ Promotion of the using the tool (STAR)

6- 3 . Future work (2/2)

- Change the situation to the “good spiral” of information leveraging

Conclusion

➤ Issues on KM

- Inadequate Information sharing
- The risk of Losing knowledge

➤ Activities for the issues

- Basic Policy & Standard rule
- Information sharing tool (STAR)

➤ Result of Activities

- Improve capture & storage

➤ Future work

- Less usage of the tool

- Change to the good spiral of information leveraging

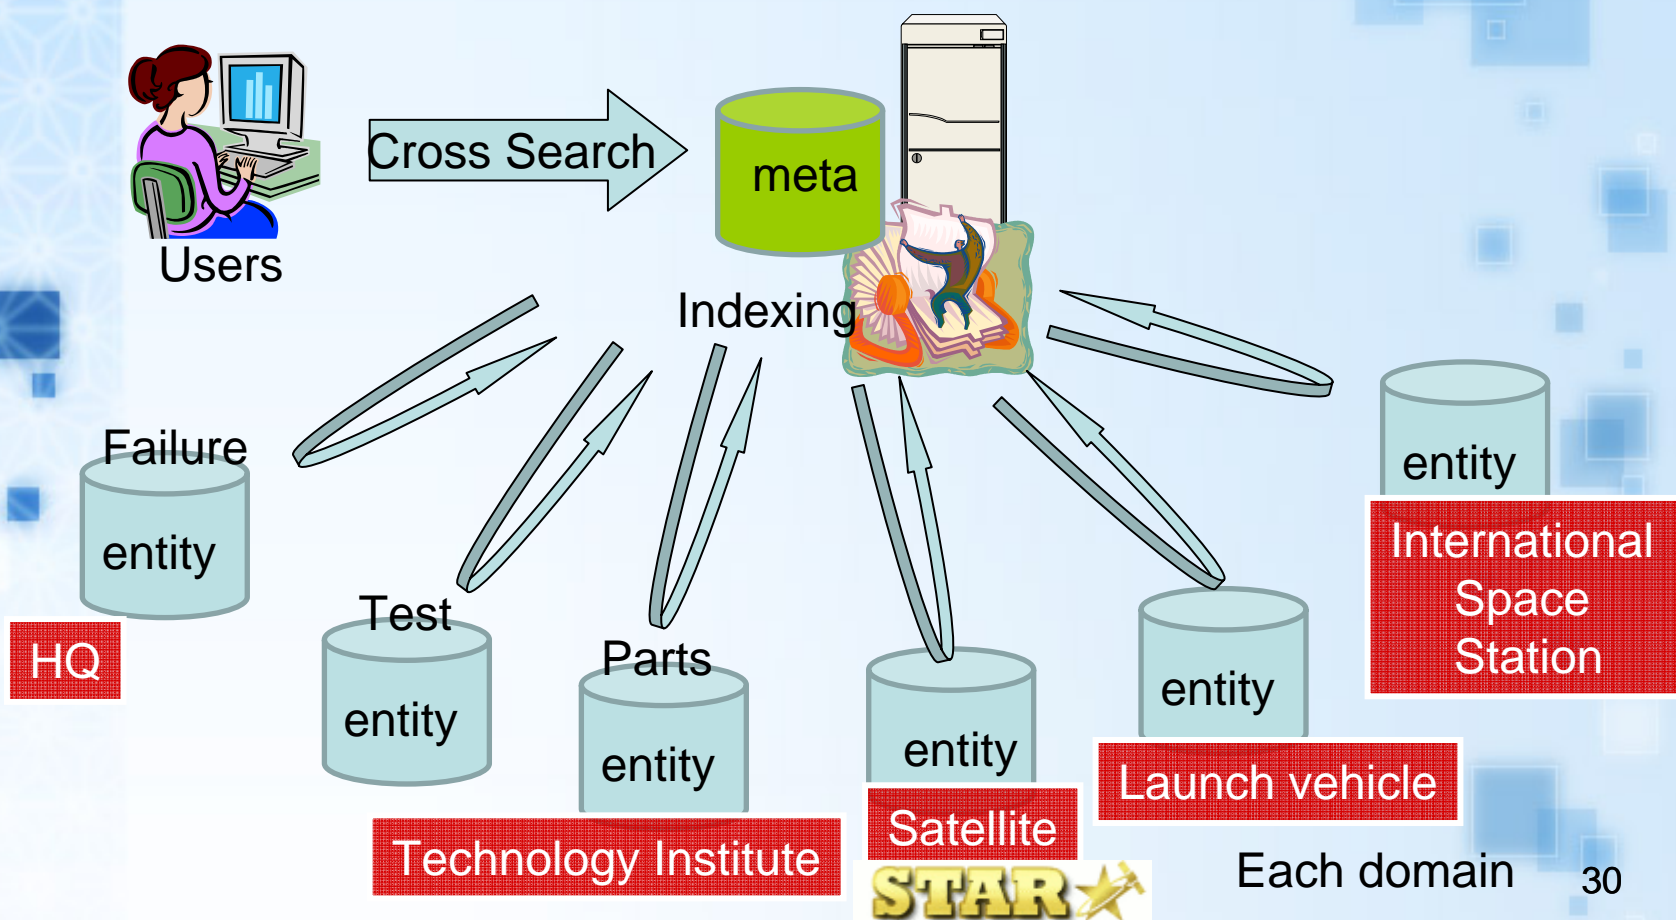

Thank you!
